

Can Xiaomi routers be used with fiber optic cables

AI Overview

Yes, many Xiaomi routers can be used with fiber optic internet, provided they have a compatible WAN port or are connected via an Optical Network Terminal (ONT).

Direct Fiber Compatibility

Some Xiaomi models, like the Xiaomi Router Be5000 and BE3600, are designed to handle fiber optic connections directly. The Be5000 features a 2.5Gbps WAN port, which supports high-speed fiber-to-the-home (FTTH) services, allowing it to maintain near-gigabit speeds without throttling or packet loss. Similarly, the BE3600 includes a 2.5G Ethernet port alongside three gigabit LAN ports, enabling full utilization of multi-gigabit fiber broadband. These routers are often labeled as fiber-ready or compatible with GPON networks.

Using an ONT with Xiaomi Routers

For most residential fiber setups, an Optical Network Terminal (ONT) is required. The ONT converts the incoming fiber optic signal into an electrical signal that standard routers can use. In this setup:

- The fiber optic cable from your ISP connects to the ONT.
- An Ethernet cable links the ONT to the Xiaomi router's WAN port.
- The router is powered on and configured with your ISP credentials if needed. This method works with Xiaomi routers that do not have a dedicated fiber port, such as the Mi Router 4A Gigabit Edition, which has a standard gigabit WAN port and can handle fiber speeds above 100 Mbps when connected through an ONT.
