

# Distribution box AC

## AI Overview

An AC distribution box safely distributes electrical power, protects circuits with MCBs, and can include surge protection for both single-phase and three-phase systems.

### Overview

An AC distribution box (ACDB) is an essential electrical component that distributes alternating current (AC) from the main supply to multiple circuits while providing protection against overloads and short circuits. It is widely used in residential, commercial, industrial, and solar power systems .

### Types

- **Single-Phase AC Distribution Box:** Typically includes a two-pole MCB and a single-phase Surge Protective Device (SPD). Suitable for systems ranging from 1 kW to 5 kW .
- **Three-Phase AC Distribution Box:** Equipped with a four-pole MCB and a three-phase SPD, supporting power ranges from 4 kW to over 20 kW. Often includes DIN rail-mounted indicators for monitoring .

### Key Features

- **Miniature Circuit Breakers (MCBs):** Automatically disconnect the AC supply during overloads or faults, ensuring safety .
- **Surge Protective Devices (SPDs):** Protect connected equipment from voltage spikes and surges, especially important in solar installations .
- **Weatherproof Enclosures:** Many ACDBs come in IP65-rated enclosures, making them suitable for outdoor installations .
