

# Does fiber optic cable require a switch or router

## Overview

For a fiber optic connection, you need an optical network terminal (ONT), a router, and appropriate Ethernet connections for wired devices. The technician powers, tests, and activates the connection to confirm full speed and signal quality. \* For larger homes, mesh. The straightforward answer is no, you do not need a modem for fiber internet. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). Fiber optic internet uses light to transmit data through fiber optic cables, which are made up of thin glass or plastic fibers. This device connects the fiber optic line to your home network.
