

Fiber optic cable and cable fixing clips

AI Overview

Fiber optic cable fixing clips secure cables safely using metal or fire-resistant materials, taper-lock or push-grip designs, and specialized installation tools to prevent damage and comply with industry standards.

Types of Fiber Optic Cable Clips

- 1. Taper Lock and Push-Grip Clips** These clips are single-component, taper-lock systems that hold fiber optic cables securely while remaining nearly invisible when installed. They are suitable for small cables, including 0.9mm, 2mm, and 3mm diameters, and can also support CCTV, alarm, or home automation wiring. Push-grip clips are designed to comply with fire safety regulations, replacing plastic clips that may melt under high temperatures.
- 2. Metal Fire-Resistant Clips** For compliance with BS7671:18th Edition and BS6701:2016+A1:2017, all fiber optic cables must be supported by metal fixings. Firefly metal cleats are corrosion-resistant, quick to install, and prevent cable collapse in fire scenarios. They are attached using fast-fix concrete screws and are available in sizes from 10mm to 50mm diameter.
- 3. Nail-In, Hammer-On, and Beam Flange Clips** These clips are made from high-quality spring steel and can be installed on ceilings, beams, or flanges. They provide a secure hold for fiber optic cables and allow for easy installation in industrial or commercial settings. Some designs include threaded rods or eye lag screws for additional support.
- 4. Coiling and Bend-Limiting Clips** Specialized clips, such as coiling clips, snap together to form a smooth, curved surface that accommodates fiber bundles while limiting bend radius. These clips prevent crushing, kinking, and micro-bending, ensuring signal integrity in short-distance installations like FTTH/FTTB curbside applications.
