

Has the fiber optic patch cord company gone out of business after 23 years

AI Overview

A fiber optic company closing after 23 years reflects broader industry pressures, including rising material costs, supply chain delays, and financial challenges in the fiber optic sector.

Industry Context

Fiber optic companies, especially those involved in patch cords and infrastructure, have faced significant challenges in recent years. Rising material costs, such as polyethylene for cable jacketing, have doubled in price, while fiber optic cable prices increased by up to 35% since 2021. Supply chain disruptions, particularly for optical connectors and enclosures manufactured in Asia, have extended lead times from 6 weeks to over 20 weeks, creating financial strain for companies operating on fixed-bid contracts. Labor shortages in skilled fiber installation roles have further increased operational costs, with some companies raising base pay by up to 25% to attract certified technicians .

Impact of Company Closure

When a long-standing fiber optic patch cord company goes out of business, customers may face challenges in sourcing replacement cables, maintaining warranties, or obtaining technical support. Projects relying on the company's products may experience delays, particularly in high-speed broadband deployments or enterprise network upgrades. Communities expecting fiber infrastructure may also see temporary disruptions if the company was involved in local deployment projects .
