

How many factory managers are there in a Vietnamese optical cable factory

AI Overview

The exact number of factory managers in a Vietnamese optical cable factory is not publicly disclosed, but management typically scales with factory size and workforce.

Vietnamese optical cable factories, such as those operated by Viettel Manufacturing Corporation (VMC) or VNPT, often employ hundreds to over a thousand staff and operate multiple production lines including fiber optic cable systems, SMT chains, and precision mechanical equipment . In such factories, management is usually structured hierarchically, with a general director or factory director overseeing operations, supported by department heads or line managers responsible for production, quality control, maintenance, and logistics . For a factory like VMC, which spans 26 hectares and employs around 1,300 people, it is reasonable to estimate that there could be dozens of managerial positions, including supervisors for each production line, quality assurance, and technical departments . Smaller private or foreign-invested optical cable factories may have fewer managers, often ranging from 5 to 20, depending on the scale of operations and automation level . In general, the number of factory managers in Vietnam's optical cable industry is influenced by factors such as:

- Factory size and workforce
- Number of production lines and product types
- Level of automation and technology
