

How much does a dedicated mini electrical distribution box cost

AI Overview

A dedicated mini electrical distribution box typically costs between \$100 and \$700 for the unit alone, with total installed costs ranging from \$600 to \$2,000 depending on amperage, features, and labor.

Unit Cost

The price of a mini distribution box varies based on amperage rating, material, and included components. Basic 100-amp metal enclosures usually cost \$100-\$400, while 200-amp units or boxes with advanced safety features, surge protection, or smart monitoring can range from \$400-\$700 for the panel itself. Plastic enclosures or smaller single-phase units may be at the lower end of this range, whereas stainless steel or weather-resistant outdoor boxes command higher prices.

Installation and Labor

Professional installation is a significant part of the total cost. For a standard residential setup, labor typically adds \$500-\$1,500, depending on complexity, local labor rates, and whether rewiring or permits are required. Total installed costs for a mini distribution box generally fall between \$600 and \$2,000, with higher-end scenarios (e.g., 200-amp upgrades, outdoor-rated panels, or subpanel integration) reaching \$2,500 or more.

Factors Affecting Cost

- **Amperage and Circuit Count:** Higher amperage panels and more circuits increase both material and labor costs.
