

How to connect a fiber optic panel and a network cable

AI Overview

Use a fiber-to-Ethernet media converter or an Optical Network Terminal (ONT) to bridge fiber optic panels with standard network cables.

Step 1: Gather Necessary Equipment

- Fiber optic panel: The termination point for your fiber cables.
- Fiber optic cable: Ensure the type matches your panel (single-mode or multi-mode).
- Fiber-to-Ethernet media converter or ONT: Converts optical signals to electrical signals compatible with Ethernet.
- Ethernet cable: Typically Cat6a or higher for connecting the converter/ONT to your network switch or router.
- Optional tools: Fiber cleaver, connector kits, and safety equipment for handling fiber strands safely .

Step 2: Connect Fiber to the Converter or ONT

- Identify the correct port on the fiber panel for your fiber cable.
- Plug the fiber optic cable into the panel, ensuring the connector type (LC, SC, or ST) matches the port.
- Connect the other end of the fiber cable to the fiber input port on the media converter or ONT.
- Ensure the connection clicks securely to avoid signal loss .
