

How to connect the machine s fiber optic cable to the router

AI Overview

To connect a fiber optic cable to your router, you must first use an Optical Network Terminal (ONT) to convert the optical signal into an electrical signal, then link the ONT to your router via an Ethernet cable.

Step 1: Gather Necessary Equipment

- Optical Network Terminal (ONT): Provided by your ISP, it converts the fiber's light signal into an electrical signal your router can use .
- Fiber optic cable: Usually single-mode with SC/APC or SC/UPC connectors, provided by your ISP .
- Router: Ensure it supports fiber input indirectly via Ethernet (WAN port) or has an SFP port if directly compatible .
- Ethernet cable (Cat5e or higher): Connects the ONT to the router .

Step 2: Install the ONT

- Locate the fiber optic wall outlet where the ISP's fiber line enters your home .
- Connect the fiber optic cable from the wall outlet to the ONT's designated optical port. Handle the cable carefully, avoiding bending or touching the glass tip .
- Power on the ONT and wait for the status lights to stabilize, which may take a few minutes .

Step 3: Connect the ONT to Your Router
