

How to wire a dedicated power distribution box for surveillance cameras

AI Overview

To wire a CCTV power distribution box, connect each camera's positive and negative leads to the corresponding terminals on the box, ensuring correct polarity and using proper cables like Siamese or DC pigtails.

Choosing the Right Power Supply Box

Select a 12V DC box for most analog and IP cameras, or a 24V AC box for PTZ cameras or higher-power devices . Centralized power boxes simplify maintenance, reduce clutter, and allow easy fuse or PTC reset monitoring .

Wiring Steps

- Identify Polarity
- Positive wires are red, negative wires are black .
- Ensure the camera's power plug matches the box's terminals to prevent damage.
- Use Proper Cables
- Siamese coax cable: combines video and power in one cable.
- DC pigtail: allows direct connection to the camera's power input .
- Connect to the Power Box
- Strip the cable ends and attach the red lead to the positive terminal and the black lead to the negative terminal.
- For multiple cameras, connect each pair of leads to separate terminals or ports on the box .
