

Lc100g multimode fiber

Overview

The 100G QSFP28 to 4 duplex LC Breakout Active Optical Cable operates over Multi-Mode Fiber (MMF). It complies with SFF-8436, SFF-8431, and QSFP MSA standards, as well as the hot-pluggable QSFP28 MSA standard. Real-time configuration is possible through FS BOX. The Cisco 100GBASE Quad Small Form-Factor Pluggable (QSFP) portfolio offers customers a wide variety of high-density and low-power 100 Gigabit Ethernet connectivity options for data center, high-performance computing networks, enterprise core and distribution layers, and service provider. In modern high-speed network architectures, multimode SFP modules have emerged as a key enabler of reliable and cost-effective 100G connectivity. It connects to a 100G QSFP28 port on. This OM5 duplex multimode 50/125 fiber patch cable is a wideband multimode fiber (WBMMF) patch cable that supports Short Wavelength Division Multiplexing (SWDM) to transmit multiple signals (wavelengths) on one fiber, increasing the bandwidth of a single fiber by at least a factor of four. It is also backward compatible with 10 Gb, 25 Gb and 40 Gb networks, so you can future-proof your current application for an eventual upgrade to 100 Gb.

Multimode SFP Guide: How to Choose for 100G Network

The 100G SWDM4 multimode SFP uses four wavelengths (typically 850nm to 940nm) to multiplex data onto a duplex multimode fiber pair. This allows it to achieve 100G transmission using only two fibers
