

Minimum requirements for laying drop optical cables

AI Overview

Drop optical cables must be installed following proper handling, bending, tension, environmental, and safety requirements to ensure long-term performance and reliability.

Cable Types and Selection

Drop optical cables are typically designed for FTTH applications and may include duct cables, self-supporting figure-8 cables, or microcables. Outdoor-rated cables should have UV-resistant jackets and water-blocking materials, while indoor cables may require FRP or steel wire reinforcement for tensile strength and lightning protection . Always select cables according to the installation environment and expected mechanical stresses.

Installation Methods

Common installation methods include:

- Direct aerial installation: Simple but may require excavation or access to poles; suitable for short runs .
- Duct installation: Provides protection and easier replacement; ideal for outdoor-to-indoor transitions .
- Blown installation: Uses compressed air to install microcables over long distances; efficient for multiple short runs .
