

Price list for drilling holes in cable tray walls

AI Overview

Drilling holes in cable tray walls typically costs around \$80-\$200 per hole, depending on size, material, and method.

Cost Estimates

The price for drilling holes varies based on hole diameter, wall thickness, and material. For example, core drilling through a 6-inch thick concrete wall can start at \$200 per job, with additional charges per hole (e.g., \$80 per 3-inch hole) for standard concrete or masonry walls. Smaller holes in brick or block walls may be less expensive, often ranging from \$80 to \$150 per hole, especially if using standard drills rather than specialized core drilling equipment.

Factors Affecting Price

- **Wall Material:** Concrete, brick, or block walls require different drill types and effort. Harder materials like reinforced concrete increase cost.
- **Hole Size:** Larger diameters or deeper holes require more powerful equipment and time, raising the price.
- **Height and Accessibility:** Holes above 5 feet or in difficult-to-reach areas may incur additional labor costs.
- **Fire Safety Compliance:** If the wall is fire-rated, proper sealing and fire-stopping after drilling is required, which can add to the overall cost.
- **Equipment:** Diamond or core drills are more expensive to operate than standard SDS or hammer drills, but they provide cleaner, precise holes.
