

Price of power modules for factory distribution boxes

AI Overview

Power modules for factory distribution boxes typically range from \$50 to several hundred dollars per module, depending on specifications, protection features, and order volume.

Pricing Overview

The cost of power modules varies widely based on type, capacity, and manufacturer. Standard modules for industrial or vehicle applications, such as Littelfuse PDMs, are designed for centralized, safe power distribution and can handle fuses, relays, and circuit breakers. These modules are built for harsh environments and may cost \$50-\$300 per unit for small quantities, with prices decreasing for bulk orders (DigiKey, Littelfuse). For custom, factory-assembled plug-and-play modules, such as those used in data centers or industrial E-Houses, pricing is higher due to integration, testing, and customization. These modules are designed to reduce on-site labor and installation risk, and costs can range from several hundred to over a thousand dollars per module, depending on complexity and features like monitoring systems, IP protection, and scalability (Siemens).

Wholesale and Factory-Direct Options

Wholesale suppliers and manufacturers, such as those listed on Global Sources, offer factory-direct pricing for power distribution boxes and modules. Prices are often negotiable based on minimum order quantities (MOQs), customization, and shipping. Typical wholesale modules may start around \$50-\$100 per unit for standard configurations, with larger or specialized modules costing more.
