

Six-core multimode armored optical fiber

AI Overview

A six-core multimode armored optical fiber cable is a durable, high-performance cable designed for indoor, outdoor, and industrial applications, supporting high-speed data transmission with enhanced mechanical protection.

Overview

Six-core multimode armored optical fiber cables contain six individual fiber cores capable of transmitting data simultaneously. The multimode designation (OM2 or OM3) indicates the fiber's core diameter and bandwidth capacity: OM2 typically supports 10Gbps up to 300 meters, while OM3 can handle higher speeds over longer distances. Armored construction provides mechanical protection against crushing, bending, and environmental hazards, making these cables suitable for harsh conditions.

Construction and Materials

- **Fiber Core:** High-quality multimode fibers (OM2 or OM3) with 50/125 μm core/cladding dimensions.
- **Reinforcement:** Kevlar strands and stainless steel armored tubes enhance tensile strength and pressure resistance.
- **Outer Jacket:** TPU or plenum-rated jackets provide flexibility, wear resistance, and protection against environmental factors.
- **Connectors:** Often integrated LC-type connectors with dust caps and protective aluminum housings for reliable, repeated connections.
