

# Suriname power distribution box installation price

## AI Overview

The cost of installing a power distribution box in Suriname typically ranges from USD 150 to over USD 1,000 depending on type, capacity, and installation complexity.

### Pricing Overview

Surface-mounted small distribution boxes for residential use are available online with prices that include the product, international shipping, import duties, customs clearance, and local delivery, often starting around USD 150–300 for basic units . These are suitable for single-phase residential setups and small commercial applications. Underground or high-capacity distribution boxes designed for urban or industrial use, such as underground box transformers with high and low voltage cabinets, can cost significantly more. These units, which may range from 30 kVA to 1000 kVA, include advanced features like waterproofing, corrosion-resistant stainless steel shells, plug-in fuses, and IP68 protection, with installation costs influenced by site preparation, foundation work, and integration with existing infrastructure . Commercial and industrial panels with multiple circuits, bus ducts, or smart monitoring capabilities are priced higher due to enhanced durability, safety features, and compliance with electrical codes. Installation for these systems may require professional electricians and specialized equipment, adding USD 200–500 or more to the total cost depending on complexity .

### Factors Affecting Installation Costs

- Type of Distribution Box: Surface-mounted vs. underground, single-phase vs. three-phase, residential vs. industrial.
