

Types of Ladder Cable Trays in East Africa

AI Overview

Ladder cable trays in East Africa are available in welded and bolt-and-nut types, with various materials and finishes to suit industrial and commercial applications.

Common Types of Ladder Cable Trays

- **Welded Ladder Cable Trays** These trays are fabricated with welded rungs and side rails, providing high strength and durability for heavy cable loads. They are ideal for industrial environments where long spans and heavy-duty support are required. Welded trays are typically available in pre-galvanised, hot-dip galvanised, powder-coated, or stainless steel (304/316) finishes to resist corrosion .
- **Bolt-and-Nut Ladder Cable Trays** These trays use bolted connections for assembly, offering flexibility in installation and easier modifications on-site. They are suitable for medium-duty applications and allow for customizable lengths and configurations. Finishes include pre-galvanised, painted, or hot-dip galvanised steel .
- **Perforated Ladder Cable Trays** These trays feature perforated rungs or side rails, which improve ventilation and heat dissipation for electrical cables. They are commonly used in commercial buildings and data centers where airflow is important to prevent overheating .
- **Stainless Steel Ladder Cable Trays** Made from 304 or 316 stainless steel, these trays are ideal for corrosive environments, such as coastal areas or chemical plants. They provide long-term durability and are resistant to rust and chemical damage .
